

WINNERS®

TESTED AND APPROVED BY
SUCCESSFUL PIGEON FANCIERS.

2024 - ENG

With Belgian Winners we make the difference.

Thomas Lataire
CEO Group Lataire bv

Belgian Winners stands for Belgian top quality. In the production department of Orovét bv, a subsidiary of Groupe Lataire bv, high quality health products for racing pigeons are produced and developed.

Precisely because the quality, the type of raw material and its application makes the difference, we have surrounded ourselves with a nutrition expert from the sports world, a pigeon vet, a nutrition engineer and an experience expert.

The "pigeon sport" evolves just as in all other sports. The "type" athlete and his guidance from the past, wouldn't even come to work today. Why? Because in all branches of sport, the bar is being raised more and more.

Every pigeon fancier has his own opinion and interpretation concerning the use of supplements. But it's a good thing too.

The success with pigeons depends on a combination of factors: the experience of the fancier, the quality of the pigeons, the loft and the nutritional support. With the nutritional system of Belgian Winners, we make the difference.

Ambachtenlaan 3-5
9880 Aalter
Belgium

History in animal feed sales since 1947

The Lataire family is ready for the third generation as a trader in animal feed. In 1947 Gerard Lataire started a company in grains and feed in Beernem (Belgium) and served the farmers in the region with the brands Remy (Wijgmaal), Vanhove (Ledeborg), Buysse (Ingelmunster), Talpe (Kortrijk) and Debaillie (Roeselare).

From 2009 onwards, Group Lataire, led by Thomas Lataire, took a clear focus by specializing in 'Animal Healthcare'. More than 2300 vitamins, supplements, medicated lenses and health products for birds and pigeons are sold worldwide by Group Lataire in more than 40 countries.

In Belgium, subsidiary Belphar med bv, as a wholesaler, takes care of the logistical distribution of the supplements, while in the Netherlands, subsidiary TNL Pharma bv, as a pharmaceutical wholesaler, takes care of the distribution of the medicines. The production department Orovet bv develops and produces its own brands as well as private label products. And Avimedis bv takes the online strategy under its wings. With this structure of companies, Group Lataire plays with a certain focus a leading role in the niche of pigeon racing.

Quick recovery is essential to build up to the next race. When pigeons have made heavy efforts, they can only recover sufficiently when they drink water with **WINNERS Recup 'Forte'** and **WINNERS E-Trolyt (powder of liquid (new))** when they return home. The Betaine hydrochloride present in the **WINNERS E-Trolyt** also stimulates the appetite.

700g - Art. n° 81154
500ml - Art n° 81236

E-trolyt (liquid) + betaine hydrochloride

RECOVERY – MOISTURE MANAGEMENT REGULATOR - ENERGY

WINNERS E-Trolyt are indispensable electrolytes for the health, performance and metabolism of pigeons. They contribute to a fast recovery of the body fluids after heavy efforts. The recovery phase is shortened with WINNERS E-Trolyt. During the warm weather conditions WINNERS E-Trolyt can also be given 1 day before baskeing in order to retain moisture. When the pigeons returning home, combine with WINNERS Win-Amino Plus.

Instructions:

E-Trolyt powder: 20 g per liter water

E-Trolyt liquid: 10ml per liter water or 15ml per kg of feed

Recup 'Forte' caps / powder

ACCELERATED RECOVERY AFTER EXERTION

Winners Recup "Forte" Caps, in combination with Recup "Forte" powder in the drinking water of pigeons, ensures a faster recovery of their muscles after heavy exertion. Recup "Forte" Caps is not a substitute for the Recup "Forte" powder. Important: 1 capsule/pigeon as soon as possible after returning home.

180 caps - Art. n° 81201

Winners Recup "Forte" powder contains 3 types of complex carbohydrates. These carbohydrates ensure a quick recovery of the energy level, which makes the metabolism of the pigeon, the necessary nutrients (such as proteins – fats – vitamins and minerals) faster and easier to absorb and process.

Instructions: 1 measuring spoon (20 g) per liter of water, when back home, When coming home, combine with WINNERS Win-Amino Plus. And as soon as possible, 1 capsule/pigeon Recup "Forte" Caps. To make a perfect "hypertonic" drink after exertion(s), we advise to add 10g/l E-Trolyt of Recup "Forte" per liter water to the drinking water. As of the next meal, provide 1 measuring spoon (10g) of Energy Start "Forte" per kg of moistened food.

TIP: in warm weather, 3 days before baskeing, add E-Trolyt to the drinking water at a rate of 20 g/l

500g - Art. n° 81184

The Winners System

Raoul & Bert Penne (Nederhasselt, BE)

Win-Amino Plus

AMINO ACIDS - FASTER RECOVERY AFTER EXERCISE - MUSCLE STRENGTHENING - ENERGY RECOVERY - ELECTROLYTES

Win-Amino Plus is a combination of high-quality amino acids, a source of easily digestible and easily absorbed proteins and electrolytes. Based on this composition, Win-Amino Plus not only ensures accelerated recovery after exercise, but also has a very beneficial effect during the moulting and breeding process. In addition, Win-Amino Plus contains the following herbs (essential oils): Echinaceae: supports the immune system and helps recovery after physical exertion Rosmarinus: is an antioxidant + anti-inflammatory Curcuma: antioxidant + anti-inflammatory Zingiber: reduces muscle pain.

Instructions:

During the racing season: **after the race:** 15 ml/liter drinking water and combine with E-Trolyt of Recup Forte. **Day of basketing:** 10 ml/liter drinking water. During breeding and moulting period: 10 ml/liter drinking water (3 - 4 days / week)

Energy Start 'Forte'

PROTEIN RECOVERY - MUSCLE BUILDING - CONDITION

Energy Start "Forte" reduces lactic acid in the muscles and improves stamina. A very decisive factor during the sports season. It is scientifically proven that the absorption by the pigeon metabolism of protein-rich grains and seeds takes about 24 h to 48 h. The absorption by the pigeon metabolism of the proteins, amino acids in Energy Start "Forte" takes only 8h-12h. This is a good time gain in the recovery of your pigeons after the race and extra building of the muscle mass, strength and energy for the next race.

Instructions during the sports season: 1 measuring spoon (10 g) per kg of food. 2 days (day of returning home + next day). On the day of return, always moisten the food with Winners Finol. Don't let pigeons train the day after coming home (Sprint – mid distance and long distance).

In normal weather conditions: moisten the food with 1 tablespoon of Winchol and dry it with Energy Start "Forte". Feed immediately.

In severe weather conditions: replace the Winchol with the Finol – 1 tablespoon/kg food.

1L - Art n° 81234
250ml - Art n° 81235

350g - Art. n° 81186

1. SALMON OIL: very rich in omega 3-6, omega fatty acids of animal origins.
2. LINSEED OIL: contains large amounts of the Vit. B chain, lecithin, zinc and an enormous dose of omega 3 fatty acids. Flaxseed is the vegetable component with the highest percentage of omega 3 fatty acids.
3. WHEAT GERM OIL: the wheat germ oil contains 8 – 12% oil, which consists for more than 60% of polyunsaturated fatty acids. Promotes the development of good skin and feathering. Very rich in Vitamin E.
4. OREGANO OIL: is full of antioxidants and supports the pigeon's defense mechanism in limiting the development of bad bacteria and fungi.

500ml - Art. n° 81156

Finol

OMEGA 3-6-9 - ENERGY – SOURCE OF VITAMIN E

Winners FINOL is a combination of 4 fine, pure oils: SALMON OIL, LINSEED OIL, WHEAT GERM OIL (source of Vit. E) and OREGANO OIL. Winners Finol ensures the supply of the necessary fatty acids omega 3-6-9, which are preserved as much as possible by the specific production process.

Instructions: moisten with 1 tablespoon (15ml) of Finol/kg of food and dry with a powdered supplement if necessary.

Instructions during the breeding season:

5 days before mating: moisten 1 kg breeding mixture with 1 tablespoon Finol and dry the food with 1 ½ (15g) measuring spoon Energy Start "FORTE" and 1 teaspoon (5g) Pro-bacto+lauric acid.

From mating to the laying of the first egg: moisten 1 kg of breeding mixture with 1 tablespoon Finol (15ml) and dry the food with Vitamin A-D3-E.

From hatching the first egg to day 10: moisten 1 kg of breeding mixture with 1 tablespoon Finol (15ml) and dry the food with ½ (5g) measuring spoon Energy Start "FORTE" and 1 teaspoon (5g) Pro-bacto+lauric acid.

From day 11: 3 x per week ½ (5g) measuring spoon Energy Start "FORTE" and ½ tablespoon Pro-bacto+lauric acid.

500ml - Art. n° 81216

Sambucus Negra

ELDERBERRY + RED BEET

Recent research showed the positive effect of the elderberry (sambucus negra) comes from the different nutrients, present in these dark purple berries. These nutrients are tannins, amino acids, carotenoid, bioflavonoids, rutin and vitamins A, B & C. One of the largest advantages of elderberries are their immune boosting properties. Moreover Sambucus Negra is made of a "tincture" of elderberries instead of elderberry juice which results in a much higher concentration of elderberries in this sirup. The combination of this elderberry sirup and the well know positive properties of red beet, leads to a visible conditional difference, not only with human beings but also with pigeons.

Instructions: 15 ml/kg of mixture or per litre of water.

450 ml - Art. n° 81229
250 ml - Art. n° 81230

Winvit-S

MULTIVITAMINS - ENERGY - METABOLISM

The Winners WINVIT-S is ideal for active pigeons and pigeons that have to deliver sport performances. In addition to fast energy, the WINVIT-S also contains more than 15 different minerals/vitamins. The high dose of vitamin E promotes the recovery of muscle tissue after exercise and the general recovery capacity. Because of all these properties, WINVIT-S is an excellent support product during the racing season. In addition, WINVIT-S contains substances that support the liver, increase appetite and specific herbs that help both the intestine and the liver to function properly.

Instructions: in the water: 2 x per week 5ml / L drinking water. Do not combine with supplements containing copper or iron.

500g - Art. n° 81185

Energy Boost 'Forte'

ENERGY – AMINO ACIDS - ENDURANCE

Winners Energy Boost Forte gives an extra burst of energy and power, which greatly increases the endurance of pigeons. This composition (tested in practice) also provides an extra supply of amino acids and vitamin B-complex.

Instructions: ½ Measuring spoon (10g) for each kg of food. During 2 days before the day of basketing give Energy Boost "Forte" so that the pigeons can store more energy to be able to perform to the maximum during the race. Combine with Winners Omega Plus Oil or Winners Finol (mixture of salmon oil, linseed oil, wheat germ oil and oregano oil) to moisten the grains.

For an additional boost, feed 1 tablet of Energy Boost Tabs per pigeon in the last 2 days before basketing.

180 caps - Art. n° 81209

Energy Boost Forte caps

ENERGY - OXYGEN ABSORPTION - CONDITION

Winners Energy Boost Forte gives an extra burst of energy and power, which greatly increases the endurance of pigeons. This composition (tested in practice) also provides an extra supply of amino acids and vitamin B-complex.

Instructions: 2 to 3 days before basketing 1 cap/pigeon/day (individual cure). Maximum effect if combined with Winners Energy Boost "Forte" 500g.

500ml - Art. n° 81013

3 in 1

RESISTANCE - PURIFYING - RESPIRATORY - DIGESTION

Winners 3 in 1 is a unique composition of herbs, essential oils and after natural organic acids. Winners 3 in 1 has a positive effect on resistance, respiratory and digestion. Winners 3 in 1 in combination with Winners Broncholyt and Broncho-Drops strengthens the effect and increases training and flying pleasure. The result after the cure is really fantastic!

Instructions: 10 ml per liter of water.

Start-up phase: Winners 3 + 1 (10 ml) + Winners Broncholyt (15 ml) + Winners Broncho-Drops (10 drops) per liter of drinking water for 5 consecutive days.

Care during the sports season or relapse of flying: Winners 3 + 1 (10 ml) + Winners Broncholyt (15 ml) + Winners Broncho-Drops (10 drops) per liter of drinking water, three-weekly for 3 consecutive days. In case of loss of appetite: see startup phase.

500ml - Art. n° 81003

Broncholyt

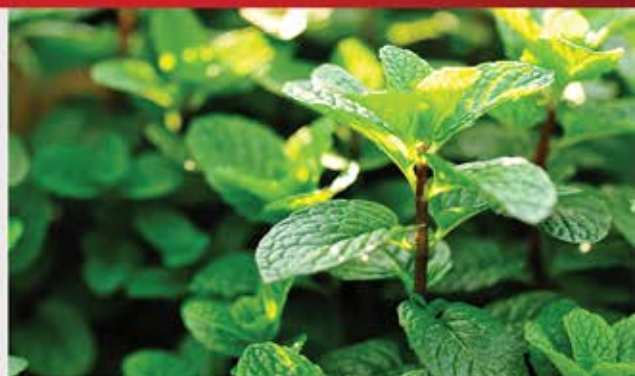

RESPIRATORY - DIGESTIVE - EXPECTORANT

Winners Broncholyt contains many different herbs such as echinacea, eucalyptus and mint. Echinacea: excellent effect on the respiratory tract. Pimpinella Anisum: for a strong improvement of the digestion. Eucalyptus: effective against mucus.

Instructions: 15 ml per liter of water.

Start-up phase: 5 days before the start of the flight season or in case of respiratory problems: Winners Broncholyt (15 ml) + Winners 3 + 1 (10 ml) + Winners Broncho-Drops (10 drops) per liter of drinking water for 5 consecutive days.

Care during the sports season or relapse: Winners Broncholyt (15 ml) + Winners 3 + 1 (10 ml) + Winners Broncho-Drops (10 drops) per liter of drinking water, three-weekly for 3 consecutive days. In case of loss of appetite: see startup phase.

50ml - Art. n° 81182

Broncho-Drops

PURIFIES THE RESPIRATORY TRACT – DISSOLVES MUCUS

Broncho drops purifies the respiratory tract, dissolves mucus and provides clearer breathing. After use according to the instructions, this results in beautiful, pink throats after a few days.

Instructions: 2 to 3/week - 5-10 drops per liter of drinking water the day after the pigeons return home.

TIP: Use in combination with Winners E-Trolyt or Winners Recup 'Forte' in the drinking water or in combination with Winners Broncholyt and Winners 3 in 1 in the drinking water.

3 in 1

**The respiratory
'system'**

Broncho-drops

Broncholyt

Broncho-Spray

ENSURES A HEALTHY AIR IN THE PIGEON LOFT

Ensures a healthy air in the pigeon loft. Has a positive effect on the pigeon's airways.

Instructions: Spray several times as high as possible in the lofts as well as once in the empty boxes. Repeat this treatment 2 to 3 times/week. For optimal results, preferably use after closing the pigeon lofts. Best to spray 1x in the pigeon baskets 1 day before basketing.

Warning: never spray directly in the direction of the pigeons.

30ml - Art. n° 81012

30ml - Art. n° 81010

Yellow Drops

YELLOW SPICE-BASED DROPS

Yellow Drops to prevent cancer and "the mucus" for pigeons. The direct dripping in the beak guarantees an effective action to purify the pigeon for a healthy throat. 100 % natural, based on an herbal essence, which is extracted from the flower, fruit, seed, leaves, peel or bark of plants using specific production techniques.

Instructions: 2 drops in the beak (and/or in the nose), the day before basketing and the day after returning home.

Eye Drops

EYE CLEANER – EYE PROTECTION

Winners Eye Drops is a care product for the eyes of pigeons. It cleans and protects eyes. By regularly taking care of the eyes, the upper respiratory tract (eye – nose – throat) will function well. Winner Eye Drops are dark in color so you can clearly see if the tear duct is open.

Instructions: One drop in each eye in the morning and evening. Best before and after the race.

How do I get more out of the performance of the youngsters? By a good recovery feed.

What does return to recovery mean: the return to a normal state or state of health, mental state or strength. In order to realize this, the right nutrition is of great importance, especially the first hours after the exertion. If you do give enough attention to the recovery phase, this will prevent not only inconveniences/ailments, but you already are preparing for the next successes.

On a nutritional level, **RECOVERY** after exercise and build-up consists of 4 components:

1. Replenish carbohydrates/moistures that have been consumed
2. Protein replenishment to speed up muscle building and recovery
3. Replenishment of consumed fats through and via the nutrition
4. Recovery and build-up of energy in the run-up to the next training/flight(s)

Choose for high quality proteins (high content of leucine, or essential amino acids) because this will improve the recovery and the build-up of the pigeon's muscles and they will be ready more quickly for the next race(s).

1. SUPPLEMENT CARBOHYDRATES /MOISTURES: It is advisable, in the period immediately after the training or races, to make sure that the pigeons replenish their moisture and carbohydrates within 30 minutes. Therefore, it is important to add per liter of water, 10 g electrolytes (WINNERS E-TROLYT powder or liquid). Starting from middle distance we recommend to add also 20g of complex carbohydrates (WINNERS RECUP 'FORTE') and 15ml WINNERS WIN-AMINO PLUS as a protein source to replenish the amount of amino acids.

2. PROTEINS FOR MUSCLE RECOVERY AND MUSCLE BUILDING: Providing proteins immediately after exercise improves muscle absorption and retention of amino acids. The protein metabolism is not only increased right after the workout, but this increase also continues until 24-48hours after the exercise. That is why it is not only important to provide proteins immediately after the effort, but also to spread this over the following day/days. Provide 10gr proteins of the pigeon's 1st meal after training/returning home. Choose for quality proteins (high content of leucine, or essential amino acids)

because this will make the muscles build even better and you'll also suffer less from stiff muscles the next day. (WINNERS WIN-AMINO PLUS and/or WINNERS ENERGY START 'FORTE')

3. REPLENISHMENT OF CONSUMED FATS (FAT METABOLISM): The replenishment of the fats consumed by the pigeons is quite simple by giving them an easily digestible mixture after training/returning home (very rich in cardy/safflower seeds, rape-seed, canary grass seed,...). This mixture can be moistened with WINNERS GARLIC OIL or a mixture of different oils (WINNERS FINOL) and then dried with extra proteins (powdered and of animal origin). The vegetable proteins are already ingested by the pigeons through properly balanced pigeon mixtures.

4. RECOVERY AND BUILDING UP OF ENERGY IN THE RUN-UP TO THE NEXT TRAINING/FLIGHT(S): Sometimes it is misunderstood that the mixtures for the pigeons naturally contain vitamins. This is not correct! Seeds do contain vitamins, but they can only be absorbed by pigeons if you let them germinate. The germination usually occurs in ornamental bird breeding but not always in pigeon racing. That's why it's important to restore energy with a supplement of powder or capsule. The "active" supplements mainly contain the following ingredients: vit. B1 - vit. B2 - vit. B6 - vit. B12 - folic acid - magnesium - vit. C and trace elements. The most effect will be obtained when you give this type of supplement at least 5 consecutive days at a rate of 10g per kg of food. (WINNERS ENERGY BOOST 'FORTE')

+32(0)476.74.45.51

WINNERS®

Entero Plus

DIGESTION – INTESTINAL FLORA

Winners Entero Plus is composed with natural organic acids and trace elements (copper and zinc). It is an acidifier for the drinking water to improve the digestion of pigeons.

By using Winners Entero Plus one ensures that the degree of acidity in the crop, stomach and intestinal system restores or remains stable. The use of Entero Plus creates an environment in the crop as well as in the intestinal system in which harmful bacteria and viruses can thrive badly. Winners Entero Plus in the water in combination with Winners Pro-bacto on the food ensures the maximum production and support of "good bacteria" in the digestive system. Pro-bacto contains lactic and butyric acid bacteria. Winners Orego-Fungi Protect may also be combined in drinking water at the same time.

Instructions: 5-10 ml per liter of water. Throughout the year by acidifying the drinking water 2 to 3 times a week with Winners Entero Plus. With liquid droppings: 10 ml per liter of water.

1L - Art. n° 81008
2,5L - Art. n° 81009

Jonagold Apple vinegar

ORGANIC ACID WITH A PROPHYLACTIC EFFECT

The fresh apple juice is fermented to a cider immediately after pressing. As the name suggests, apple vinegar is made from apples. When apple juice ferments, the sweeteners of the apples are converted into alcohol and wine is produced. When air enters the wine, the fermentation continues slowly, and the alcohol is converted into acid. It has a prophylactic effect on trichomonas and a positive effect on the digestion and the feathers.

Instructions:

During the sports season: after purifying against trichomonas:

2x per week 1 tablespoon per liter of drinking water

During moulting: 4x per week 1 tablespoon per liter of drinking water

Tip: add 1 fresh clove of garlic to the acidified drinking water.

1L - Art. n° 81200

450ml - Art. n° 81231

Orego-Fungi Protect

DIGESTION - AIRWAYS - ANTIFUNGAL

Winners Orego-Fungi Protect, for a healthy gastrointestinal system based on oregano oil, butyric acid and F.O.S. 100% natural. Increases resistance to unfavorable bacteria and fungi at gastrointestinal level. It helps pigeons to recover faster after a difficult and/or long flight and while raising youngsters. In addition, it supports the moulting period and keeps the intestinal flora healthy.

Instructions: Preventive: 1.5 ml per liter of drinking water, 3 days a week, all year round. If necessary, double the dose to 3 ml per liter of water for 4 to 5 days and then return to the normal dose. It supports intestinal health during and after the races, during breeding and moulting.

500g - Art. n° 81018

Pro-bacto + lauric acid

PROBIOTICA - INTESTINAL FONCTION - DIGESTION - CONDITION

The intestinal tract in pigeons is a huge breeding ground for bacteria, including numerous lactic acid bacteria. They form the intestinal flora or microbiota. Lactic acid bacteria are the main pro-biotics. Moreover, Winners contains Pro-bacto, butyric acid bacteria. Butyric acid is the most important source of energy for intestinal cells and has anti-inflammatory properties. As a result, it reduces pathogenic bacterial growth. LAURIC ACID: is a fatty acid, part of alkanolic acids. It is established that lauric acid has antibacterial and antiviral properties. From this lauric acid l'organism makes monolaurin. This monolaurin is capable of making the exterior side of bad bacteria and viruses soluble so the microorganism is damaged and is going to die.

Instructions: 1 teaspoon (5g) on the food. Feed to moisten with Finol or garlic oil and dry with Pro-bacto+lauric acid. After grafting against smallpox, use from day 8 to day 12. In case of infection by adeno-circo and rota virus: 1 level tablespoon/kg of food moistened with elderberry syrup. At the same time Entero Plus mixed with 20g E-Trolyt at a rate of 10ml/l of drinking water during 5 consecutive days.

1L - Art. n° 81020
500ml - Art. n° 81023

Winchol

METABOLISM - PLUMAGE - PURIFYING

Winners Winchol contains methionine and choline. These are essential sulfur-containing amino acids that protect the liver and kidneys, prevent fatty degeneration of the liver and ensure that the fats are transported to the cells that are essential for the proper functioning of the nervous system.

Instruction: 15 ml per liter of water or per kg of food.

Give Winchol all year round. Particularly recommended as preparation for and during the breeding, moulting (2x per week) and the flight season (1x per week) but do not administer in the last 2 days before the race. In periods of heavy exertion or competition, renewing the plumage or moulting disorders. Replace the solution daily.

Muta 'Forte'

MOULTING PROMOTER

A mix of 3 types of animal protein in powder form, for the supply of all essential and non-essential amino acids. Contains L-Lysine 2900* & L-Methionine 2900*. MUTA "Forte" ensures the supply of the correct amino acid profile, during the moulting process and the dropping of the down feathers.

* L-Lysine: part of the spring pigment, L-Methionine: deficiency of this leads to poor feathering.

Instructions:

10 g Muta "Forte" per kg feed moistened with Winchol, Finol, Sambucus Negra or garlic oil.

During moulting: 4 x per week until the last quill feather is fully grown.

350g - Art. n° 81188

1L - Art. n° 81155

600g - Art. n° 81064

25kg - Art. n° 81227

Herba-Chai

HERBAL DRINK WITH 10 DIFFERENT HERBS, ROOTS AND BLOSSOMS

An herbal drink with 10 different herbs, leaves, roots and blossoms. Herba-Chai supports the general condition and health of pigeons, during the sport and breeding season, but also during the moulting process and the losing of the down feathers.

Instructions: 10 ml per liter of drinking water

During sport-/breeding season: 2 x per week - 10 ml/L of water on Monday and Tuesday. During moulting: start up treatment with 10 ml/L of drinking water during 5 consecutive days. Afterwards 3 x per week as maintenance dose.

Green bath salt

BATH SALT + MINT

WINNERS Green Bath Salt creates a silky soft feather plumage. Pigeons and birds need a regular bath to keep the plumage beautiful and healthy. Therefore always add Winners Green Bath Salts to the bath water for soft, smooth feathers and relaxed muscles.

Instructions: 1 full tablespoon per 10 liters of bathing water.

Super Zeolit

FLOOR COVERING - ANTI-COCCIDIOSIS

100% natural volcanic clay mineral. Zeolites are marketed in the form of small granules, which have special surfactant adsorbing and binding properties. Can be evenly spread over the floor or under the floor grids of the pigeon loft. 25 kg Winners Zeolite covers +/- 2 m². When the top layer is saturated, rake this floor cover. In this way you can leave this product for at least a year.

Garlic oil

DIGESTION – BLOOD CIRCULATION

The positive effects of garlic on humans and animals have been known for years. Winners garlic oil has a beneficial effect on digestion and has a prophylactic effect on yeasts. Rich in linoleic acid (unsaturated fatty acid). The use of garlic oil also repels worms.

Instructions:

1 tablespoon (15 ml) per kg of cereals.

250ml - Art. n° 81056
500ml - Art. n° 81057

Ormi-Vita

PREMIUM BREWER'S YEAST

Winners Ormi-Vita is a dried high-quality beer yeast. Ormi-Vita contains mainly B vitamins, which contribute to an optimal energy supply and stimulate the production of red blood cells. It is also a very large source of protein and rich in various types of amino acids.

Instructions: 1 tablespoon per kg of food. The food can be moistened with garlic oil, Finol, Winchol or Sambucus Negra.

700g - Art. n° 81052
1,5kg - Art. n° 81203

The moulting period, a key indicator for the next season.

When the racing season comes to an end, the "big" moult has already started for most pigeons. The moment for the fancier to reduce his focus on the pigeons and to spend more time with his family, relatives or possibly plan a vacation. Everyone within the pigeon sport knows, in order to perform better with pigeons, more efforts and sacrifices are needed from the fancier. If for some the season is disappointing and did not bring the wanted results, "too little" attention is dangerous for the pigeons, even though the moulting of pigeons, also an important period, is in the run-up to the breeding period and the next racing season. A new, optimally formed and high-quality plumage is a basic requirement, which can greatly reduce possible disappointments in the next year.

What are the most important points of attention:

1. First of all, have your pigeons checked by means of a relief examination after the racing season. Possible infections can cause a delay or the end of the moulting process.
2. A good, varied diet.
3. Regularly a bath.
4. Lots of air and light (aviary).
5. Rest.

Don't forget that the metabolism of the pigeons is running at full speed. The liver is extremely important in the purification of the blood, which makes sure that the right building materials are delivered for, among other things, the build-up of the plumage. So, it is very important to support the liver sufficiently. In this period, one has to make sure that the pigeons always have sufficient minerals such as WINNERS SUPERGRIT and MINERAL-VIT at their disposal. The detoxification of the liver of foreign substances (e.g. medication) is a necessary element and can be done in 2 ways:

1. BASIC SUPPORT MOULTING:

a) 2 to 3 times a week composed "tea" in the drinking water for a purifying effect (WINNERS HERBA-CHAI).

b) the use of "Chol" products such as WINNERS WINCHOL (contains methionine, an essential sulfur-containing amino acid that cannot be synthesized by the body itself). Methionine in combination with a Vitamin B complex is important for the production of cartilage, nails and the structure of the plumage. Brewer's yeast (WINNERS ORMI-VITA) is a good supplement, is rich in Vitamin B and a source of protein. The combination of Methionine and Vit. B ensures a natural production of sulfur not only for animals but also for humans.

In case of overuse or injury of tendons, muscles and ligaments, the body needs sulfur to repair the damaged cells and to produce replacement cells. In addition, sulfur plays an important role in physical anti-inflammatory processes.

c) Add twice a week WINNERS JONAGOLD APPLE VINEGAR in the water, for a stable acidity in the crop and support of the digestive system.

2) MAXI SUPPORT MOULTING:

Besides the basic support, the fancier can choose to give the pigeons probiotics (WINNERS PROBACTO) during this period. This is a wise choice because you will support the immune system in a natural way and the pathogenic bacteria won't dominate that easy. Moreover, providing a combination of proteins of animal origin as a source of amino acids, including during moulting, is absolutely no superfluous luxury (WINNERS MUTA-FORTE and WINNERS WIN-AMINO PLUS).

For more info, call or email Bert Penne:

info@belgianwinners.com

WINNERS®

2,5kg - Art. n° 81151

Mineral-Vit

VITAMINIZED MINERALS

Winners Mineral-Vit vitaminized minerals contain important nutrients, vitamins and minerals to keep the pigeons in shape all year round. In addition to all the essential minerals, Winner Mineral-Vit also contains vitamins A, B, D and E, which are necessary for the absorption of these minerals. These vitamins promote the growth of young pigeons and fertility.

Instructions: Can be used all year round. Provide a small amount of these fresh vitamins daily.

4kg - Art. n° 81202
20kg - Art. n° 81237

Supergrit

ALL-IN SUPERGRIT - MINERALS - VITAMINS

Winners Supergrit gives your pigeons the opportunity to find all the necessary minerals and building materials in the loft. Building materials for a strong eggshell. This is indispensable for a good development of muscles and bones. You have fewer liquid droppings thanks to the charcoal and herbs.

Instructions:

7-15 g per pigeon per day. 1 teaspoon (= 7 g) per pigeon per day. During breeding: 1 tablespoon (= 30g) per couple per day.

250ml - Art. n° 81222
450ml - Art. n° 81221

250g - Art. n° 81212

350g - Art. n° 81186

Vitamin A-D3-E Punch Plus

FERTILITY - ANTIOXIDANT

Winners Vit. A-D3-E Punch Plus with selenium is the ideal liquid vitamin composition for perfect breeding and good laying. Winners Vitamin A-D3-E with selenium should be given from 2 weeks before pairing up. The highly concentrated, stabilized vitamin E. with selenium is the ideal breeding vitamin, to be started just before pairing until the youngsters are weaned for 1 month.

Instructions: 5 ml per liter of water.

Vitamin A-D3-E + Selenium

BREEDING - FERTILITY - GROWTH - CONDITION

The ideal vitamin composition for perfect breeding and good laying (Vit. E). the vit. A, ensures good growth of the youngsters and Vit. D3 plays a very important role in the Phosphorus-Calcium conversion process.

Instructions: 10g per kg of feed, 2 weeks upfront the mating of the breeding couples till the youngsters are 1 month weaned.

Energy Start 'Forte'

Instructions during the breeding period:

5 days before pairing:

Day 1: Moisten 1 kg cultivation mixture with 1 tablespoon (15ml) Winners Finol and dry the food with 1 ½ measuring spoon (15g) Energy Start "Forte" and 1 teaspoon (5g) Winners Pro-bacto+lauric acid.

From the first egg to weaning: moisten 1 kg of breeding mixture with 1 tablespoon of Winners Finol (15ml) and dry the food with 1 ½ (15g) measuring spoon of Energy Start "Forte" and 1 teaspoon (5g) Winners Pro-bacto+lauric acid.

50ml - Art. n° 81232

500ml - Art. n° 81214

3 pcs - Art. n° 81215

Licefree Oral Activ

PREVENTIVE PROTECTION AGAINST INFESTATIONS OF LICE AND MITES

Winners Licefree Oral is a 100% safe complementary feed with aromatic substances against blood-sucking parasites (eg blood lice). Licefree Oral has a preventive effect making the blood untasty so the blood lice isn't going to absorb it. **IMPORTANT:** the concomitant use of Winner's Licefree Protect spray 500 ML avoid at the same time blood lice can't build a nest in the seams and gaps of the pigeon loft or cages. The use of Winner's Licefree Oral 500 ML in the drinking water and the Winner's Licefree Protect spray 500 ML in the seams and gaps of the loft, is a safe and effective method in the battle against blood lice.

Instructions: 1 ml / liter drinking water

When used: Week 1: daily. Week 2: 4x/week. Week 3: 2x/week. From week 4 on: 1x/week as a maintenance dosage When: from the moment the ambient temperature is or above 10° Celsius/50° Fahrenheit, the blood lice eggs start to develop.

Licefree Protect Spray

MECHANICAL PREVENTION AND BATTLE AGAINST BLOOD MITE/LICE IN THE PIGEON LOFT

Licefree Protect Spray is a ready for use solution based on silicon dioxide. The miniscule crystals in this solution have an exfoliating effect. When the blood lice are moving to the pigeons to feed themselves, their skin is going to be scrubbed and damaged with a desiccation blood lice as a result. Concomitant use of Licefree Protect Oral and Licefree Protect Spray is very important in the battle against lice and mites in the pigeon loft.

Instructions: before using the product, remove or cover any feeding and drinking bowls. Spray from 30 cm distance from all surfaces or perches, nests and nestbowls; also treat all corners, cracks and crevices where you can find mites. Repeat this procedure if red lice appear again or when the white layer of powder is covered by dust.

Pro-Smoke

ANTI-PARASITIC SMOKE TABLET

The Winner's Pro Smoke tabs consist of a pyrotechnique or heat producing mix, which after being which smoothly burns after being lighted. These tabs are mixed homogeneously with a specific herbal mix, which start to vaporize once lighted and results in getting rid of ticks, mites, flies,..... Winner's Pro Smoke has at the same time a positive influence on the pigeons respiratory tract, reducing the risk on respiratory diseases.

1 tab is sufficient for approx. 75 m³. Pigeons can stay 100% safe in the loft during the treatment and results in better health conditions and well-being of the pigeons.
